

# Frontier Max

*From benchmark to runtime.*

Workload-aware model decisions, grounded in public evidence.

[agent-frontier.monilpat.chatgpt.site](https://agent-frontier.monilpat.chatgpt.site)

EVIDENCE

POLICY

ROUTE

# There is no universally best model.

## THE WRONG QUESTION

“Which model scored highest?”

A rank erases the constraints that determine whether a model works.

WORKLOAD → OBJECTIVE

**INTERACTIVE CODING** Speed—after quality clears the floor

**DELEGATED AGENT** Cost—after quality clears the floor

**REAL-TIME / BATCH** p95 latency or accepted throughput

Tokens matter when they bind cost, context, or time.

# Evidence becomes an executable decision.

The reasoning stays inspectable end to end.

**READ**

Source + version

**DECIDE**

Hard gates + frontier

**ROUTE**

OpenRouter →  
OpenCode

**PROVE**

Versioned policy receipt

**Public evidence in. Reproducible policy out.**

# The task determines the route.

Task brief → Gemini intent → validated policy → deterministic route

## INTERACTIVE

**“Fix this  
with me.”**

### CURRENT POLICY

Fastest available model in the high coding tier—  
ranked by p50 throughput.

## DELEGATED

**“Migrate this  
overnight.”**

### CURRENT POLICY

Cheapest available model in the high coding tier.

# Free evidence earns trust. Decisions capture value.

FREE

## Evidence + CLI

Explore benchmark provenance and launch a local route.

PAID

## Team workspace

Share policies, alerts, and decision receipts.

PAID

## Routing API

Apply governance and model selection in production.

INITIAL BUYER

AI platform · engineering · FinOps teams operating multiple models

First wedge: coding-agent model selection

# Make every benchmark a decision teams can execute.

The decision + provenance layer for model selection.

BUILT BY

Monil Patel · Staff Applied AI · 7 years at Meta

Evaluation · post-training · coding-agent systems

WE'RE LOOKING FOR

05

**design partners**

Costly multi-model workflows

GCP

**product support**

Gemini decision layer

VC

**investor partners**

Model-selection infrastructure

**Frontier Max**
